

Nagios XI - Reset Security Credentials

Article Number: 143 | Rating: 1/5 from 1 votes | Last Updated: Thu, Feb 18, 2016 at 1:17 AM

Description

Nagios XI has back-end credentials that are used internally by the application sub-components. These are not used by the end users, nor do you need to know what they are. However you might like to reset these credentials due to certain circumstances such as:

- Immediately after a fresh install of XI
- After a security breach / part of protocol

Resetting The Credentials

Navigate to **Admin > System Config > Reset Security Credentials**

Component Credentials / Config Manager Admin Password

This password is used to access Core Configuration Manager (CCM), however since Nagios XI 2014R1.4 admin users in XI were automatically granted access to CCM. Hence this password does not need to be known.

Versions pre-2014R1.4 require a separate password to access CCM. Change this field if you require to define the password.

Sub-System Credentials

These are the back-end credentials that are used internally by the application sub-components

If you require, enter values into each of the fields.

Click **Update Credentials** if you updated and fields and require them to be applied.

Final Thoughts
