

# Nagios XI - HTTP 500 Error / PHP Parse error - Unexpected \$end

Article Number: 153 | Rating: Unrated | Last Updated: Mon, Feb 22, 2016 at 7:35 PM

## Problem Description

For those doing manual installations, some of the tools embedded in Nagios XI use the PHP short tags feature, which is not necessarily enabled on all web servers by default. This results in the errors "HTTP 500 Error"/"PHP Parse error - Unexpected \$end".

## Resolving The Problem

To fix this issue, locate your php.ini file (located at `/etc/php.ini` for CentOS installations), and verify that "short\_open\_tag" is set to "on." We intend to use full tags for future version, but some components and addons may still use them, so we recommend leaving this setting to "on."

## Final Thoughts
