

Nagios XI - MSSQL Query Wizard - Invalid characters in the username

Article Number: 734 | Rating: Unrated | Last Updated: Thu, Aug 3, 2017 at 12:48 AM

Problem Description

After running the MSSQL Query wizard your new service has an UNKNOWN state with the following error:

```
UNKNOWN: Invalid characters in the username.
```

This problem can occur when trying to connect using Windows authentication and your username is something like `user\domain`, it is complaining about the backslash (`\`).

Resolution

The `check_mssql` plugin can be updated to allow the backslash. Establish a terminal session to your Nagios XI server as the user root.

Execute the following command to open the `/usr/local/nagios/libexec/check_mssql` file in vi:

```
vi /usr/local/nagios/libexec/check_mssql
```

When using the vi editor, to make changes press `i` on the keyboard first to enter insert mode. Press `Esc` to exit insert mode.

Jump to line 347 by typing the following:

```
:347
```

and press **Enter**.

The line you are looking for should look like this:

```
if (!preg_match("/^[a-zA-Z0-9-_{2,32}$/", $db_user)) {
```

Change it to (add `\\\\`):

```
if (!preg_match("/^[a-zA-Z0-9-\\\\_{2,32}$/", $db_user)) {
```

When you have finished, save the changes in vi by typing:

```
:wq
```

and press **Enter**.

After making these changes go back into the XI web interface and force an immediate check of the service to test that it is working correctly.

Final Thoughts
