

Nagios Core - ERROR: Could not create or update nagios.configtest

Article Number: 760 | Rating: Unrated | Last Updated: Mon, Oct 16, 2017 at 1:28 AM

Problem Description

This KB article applies to the following error message when starting Nagios Core:

```
ERROR: Could not create or update '/usr/local/nagios/var/nagios.configtest'
```

Explanation

This problem occurs when the `nagios` user account does not have a user shell, typically when `nologin` is used in the `passwd` file:

```
nagios:x:1001:1001::/home/nagios:/usr/sbin/nologin
```

Resolution

The resolution to this problem is to remove the `/usr/sbin/nologin` directive from the `passwd` file, or to define it as a valid shell. The following examples should resolve the problem (depending on your operating system):

No shell defined:

```
nagios:x:1001:1001::/home/nagios:
```

Bash shell defined:

```
nagios:x:500:500::/home/nagios:/bin/bash
```

Once you have updated the `passwd` file you will be able to successfully start the `nagios` service.

Final Thoughts
