

# Nagios Log Server - Logstash not running after upgrade to 2.0

Article Number: 778 | Rating: 5/5 from 1 votes | Last Updated: Tue, Nov 14, 2017 at 11:48 PM

## Overview

After upgrading to Nagios Log Server 2.0, the logstash service doesn't remain running.

## Diagnosis

The `/var/log/logstash/logstash.log` file will show a message similar to:

```
{:timestamp=>"2017-11-14T08:24:17.314000-0700", :message=>"Pipeline aborted due to error", :exception=>"LogStash::
ConfigurationError", :error=>"The setting `host` in plugin `elasticsearch` is obsolete and is no longer available. Please use the 'host
instead. You can specify multiple entries separated by comma in 'host:port' format. If you have any questions about this, you are invi
visit https://discuss.elastic.co/c/logstash and ask.", :backtrace=>

:level=>:error}
```

## Problem

Logic in the initially released upgrade script didn't allow logstash config files to be rewritten correctly.

## Solution

The upgrade script has been updated and a new download of the 2.0 software resolves the problem.

It can also be resolved by running the following command in a terminal session as the root user:

```
/usr/bin/php /var/www/html/nagioslogserver/www/index.php configure/write_configs_for_node
```

This command needs to be executed on each instance in your Nagios Log Server Cluster.

## Final Thoughts

For any support related questions please visit the [Nagios Support Forums](http://support.nagios.com/forum/) at:
