

Enabling Oracle Linux Optional Repository

Article Number: 815 | Rating: 4/5 from 1 votes | Last Updated: Tue, Dec 18, 2018 at 3:34 PM

Problem Description

When you attempt to install or upgrade one of the Nagios products you receive the following error:

```
ERROR: Please enable the 'Optional' repo for your system in:
```

Resolving The Problem

You need to add the Optional repository so that Nagios XI can install the necessary prerequisites using the commands below:

```
yum install -y yum-utils  
yum-config-manager --enable ol7_optional_latest
```

That's it! You should be able to run the installer again and complete your installation.

Final Thoughts
