

Nagios XI - Offloading NDO2DB To Remote Server

Article Number: 833 | Rating: 1/5 from 1 votes | Last Updated: Tue, Dec 18, 2018 at 6:30 PM

Offloading NDO2DB To Remote Server

This document is meant to show a step-by-step guide for offloading the NDO2DB daemon from the central Nagios XI server to an external, remote server. NDO2DB is an acronym of "Nagios Data Output To Database" and is a component of NDOUtils. Offloading NDO2B allows the processing of NDO to be offloaded to a server separate to your Nagios XI server.
